Submit

Back

After click on submit button You will get an email (Inbox/Spam) with **LSCID** and **Password** details like above picture, now you can login with that new login details in to the **LSCMIS portal** to update profile and view the study material.

Dear Sir,

The following Student Login FYI.

Username: LSCMIS123456789

Password: 123456789

Url: <https://lscmis.com/ugprogram/student/>

Regards,

Application Support Team,

Click the **study material link** after logging in to the **LSCMIS portal**

The screenshot shows the LSCMIS Student Dashboard. The top navigation bar is blue and contains the word "Student" on the left and a user profile icon with the text "Student:" on the right. A hamburger menu icon is located between them. The left sidebar is also blue and contains several menu items: "Dashboard", "Profile", "Study Material", "Change Password", and "Sign Out". The "Study Material" item is highlighted with a red rectangular box. The main content area is light gray and titled "Dashboard". It contains two large rectangular tiles. The left tile is blue and labeled "Profile", with a "More info" link and an external link icon at the bottom. The right tile is orange and labeled "Study Materail", with a "More info" link and an external link icon at the bottom. This orange tile is also highlighted with a red rectangular box.

Materials Management

Materials management is a core supply chain function and includes supply chain planning and supply chain execution capabilities. Specifically, materials management is the capability firms use to plan total material requirements. The material requirements are communicated to procurement and other functions for sourcing.

Get access

Fundamentals of Logistics

Generally, the in-house logistics departments in manufacturing organizations take care of all aspects of logistics. But this is not an area of core competency of manufacturing or trading organizations. Today, a lot of successful business corporations across the world are outsourcing logistics to the third party logistics providers, who are having the necessary infrastructure and expertise to do the job in a better manner.

Get access

Warehouse Management

A **warehouse management system (WMS)** is a software application, designed to support and optimize warehouse functionality and distribution center management.

Get access

Surface Transportation

The movement of people or goods by road, train, or ship, rather than by plane is known as Surface Transportation.

[Get access](#)

Forecasting & Inventory Management

Inventory or stock is the goods and materials that a business holds for the ultimate goal of resale (or repair). Inventory management is a discipline primarily about specifying the shape and placement of stocked goods. It is required at different locations within a facility or within many locations of a supply network to precede the regular and planned course of production and stock of materials.

[Get access](#)

Freight Forwarding (Ocean & Air Cargo)

A forwarder does not move the goods but acts as an expert in the logistics network. The carriers can use a variety of shipping modes, including ships, airplanes, trucks, and railroads, and often use multiple modes for a single shipment. For example, the freight forwarder may arrange to have cargo moved from a plant to an airport by truck, flown to the destination city and then moved from the airport to a customer's building by another truck.

Surface Transportation

Your progress

INTRODUCTION

Road Transport. Road transport means transportation of goods and personnel from one place to the other on **roads**. **Road** is a route between two destinations, which has been either paved or worked on to enable **transportation** by way of motorised and non-motorised carriages.

Finish Test

Time left **0:08:39**

After clicking on finish test, you will be redirected to the summary page

Select one:

- a. The circumstances relating to demand data should be recorded.
- b. If we wish to forecast demand, past sales must be used for the forecast.
- c. Forecasts made in dollars for total sales should be used by manufacturing.
- d. Forecasts should be made for individual items in a group.

Question 9

Not yet answered

Marked out of 1

 Edit question

 Flag question

Which of the following statements is TRUE about the integration of planning systems and the level of forecast accuracy?

Select one:

- a. The planning system should include information on the level of forecast accuracy.
- b. They are independent.
- c. Once the data are input into the planning system, they do not change.
- d. Forecast accuracy is implied in the planning process system.
